

“MEDICAL WASTE”: THE HAZARDS AND WAY TO MANAGE

Team : Swaralipi (PRIATA RANI SAHA, ARPITA SARKER)

ABSTRACT

Medical waste is defined as: potentially infectious waste materials generated at health care facilities, such as hospitals, clinics, physician's offices, dental practices, blood banks, and veterinary hospitals/clinics, as well as medical research facilities and laboratories. Medical centers where diagnosis and treatment are conducted generate general wastes that are highly hazardous and put people under risk of fatal diseases. In this presentation the meaning of medical waste, risk of exposure, medical waste management regulatory acts, medical waste management procedures and control techniques are presented.

OBJECTIVES

MEDICAL WASTE HAZARDS

Chemical contamination Biological contamination Radioactive contamination Multiple hazards

Some of the risks involved :

- 1.Risk of HIV infection and hepatitis due to needle-sticks
- 2.Contaminated blood etc. contracting persons etc.
- 3.Change in microbial ecology
- 4.Spread of antibiotic resistance
- 5.Leaching of liquids associated with biomedical waste into the environment
- 6.Aesthetic degradation of the environment

MODERN TECHNOLOGY Integrated Sterilizer and Shredder

Integrated Sterilizer and Shredder

PROCEDURE FOR WASTE COLLECTION

Specifically colored plastic bag should be kept in its container .bins and bags should bear the biohazard symbol.

As soon as three fourth of the bag is full of waste it should be removed from the container, tied tight with a plastic string and properly labeled.

Under no circumstances, an infectious waste should be mixed with the non-infectious waste.

TECHNOLOGY

U.S FOR MEDICAL WASTE TREATMENT

U.S. Market For Medical Waste Treatment, Containment, Management And Disposal To Reach Nearly \$3.2 Billion In 2017.

This report will be valuable to many industry participants, including the following:

- 1.Medical waste treatment providers
- 2.Medical waste disposal facilities
- 3.Medical waste containment specialists
- 4.Academic and research institutions
- Financial institutions.

Characteristics

1. Integrated Sterilizer & Shredder is a steam sterilizer with an integrated shredder.
2. Designed for on-site conversion of biological infectious medical waste in hospitals and clinics.
3. Suitable for dialysis centers, laboratories ,clinics and hospitals
4. Eco-friendly non-incineration technology are able to reduce the cost on the biomedical waste disposal.
- 5.Use only steam and electricity to process highly infectious hospital waste on-site , without emitting harmful substances.
- 6Automatic process.
- 7.Depending on the capacity , the total cycle time can be as fast as 15-35 minutes , with up to 150 kg of medical waste can be processed.

CONCLUSION

Medical waste are highly hazardous and put people under risk of fatal diseases. The understanding of medical waste management and control techniques is important . In order to ensure that people are not at risk of contracting any illnesses, hospital personnel, waste handlers and the general public must try to maintain proper storage and disposal techniques.
